SCHEDULE 4

CLASSIFICATION PROVISIONS FOR PREPARATIONS DANGEROUS FOR SUPPLY

PART II

CONCENTRATION LIMITS TO BE USED IN APPLYING THE CONVENTIONAL METHOD OF ASSESSING HEALTH EFFECTS IN ACCORDANCE WITH PART I OF THIS SCHEDULE WHERE NO SUCH LIMITS ARE GIVEN IN THE APPROVED SUPPLY LIST

SEVERE EFFECTS AFTER REPEATED OR PROLONGED EXPOSURE

Solid and liquid preparations

Solid and liquid preparations

3.—(1) —For substances that produce severe effects after repeated or prolonged exposure (R48), the individual concentration limits specified in Table III determine, when appropriate, the classification of solid and liquid preparations and shall determine which particular risk phrases are to be assigned to them.

TABLE III

Classification of the substance T	*Classification of the preparation* Xn	
T with R48	conc. ≥ 10% R48(*) obligatory	1% ≤ conc. < 10% R48(*) obligatory
Xn with R48		conc. ≥ 10% R48(*) obligatory

(*) In accordance with the approved classification and labelling guide and depending on the classification, the risk phrases R20 to R28 are also to be assigned to indicate route of administration or means of exposure.

Gaseous Preparations

(2) —For gases that produce severe effects after repeated or prolonged exposure (R48), the individual concentration limits specified in Table IIIA below, expressed as a volume/volume percentage, determine, when appropriate, the classification of gaseous preparations and shall determine which particular risk phrases are to be assigned to them.

TABLE IIIA

Classification of the substance (gas) T	*Classification of the gaseous preparation* Xn	
T with R48	conc. ≥ 5% R48(*) obligatory	0.5% ≤ conc. < 5% R48(*) obligatory
Xn with R48		conc. ≥ 5% R48(*) obligatory

(*) In accordance with the approved classification and labelling guide and depending on the classification, the risk phrases R20, R23 or R26 are also to be assigned to indicate route of administration or means of exposure.
