

## SCHEDULE 2

### METHODS OF ANALYSIS

#### 1.

#### *PREPARATION OF THE SAMPLE FOR ANALYSIS*

*Final samples which must be divided and part of which must be ground*

4.2 These are products in respect of which certain determinations are carried out without previous grinding (fineness of grinding for example) and other determination after grinding. They include all compound fertilisers containing the following phosphate ingredients: basic slag, aluminium calcium phosphate, calcined phosphate soft ground rock phosphate and natural phosphate rendered partially soluble. To that end, divide the final sample into two parts, which are as identical as possible, using a sample divider or by quartering.
