

## SCHEDULE 2

### METHODS OF ANALYSIS

#### PART II

##### *1.*

##### *PREPARATION OF THE SAMPLE FOR ANALYSIS*

#### **WARNING**

All operations connected with this procedure should be carried out as quickly as possible to minimise absorption or loss of water. Care should be taken during grinding that the temperature of the fertiliser does not rise above 45°C to avoid loss of volatile constituents. Grinding beyond the fineness required must in all cases be avoided.
