

SCHEDULE 3

Sampling and Testing Methods

Part III

Methods for the Isolation of Salmonella

B. Electrical conductance method

1. Tests shall be begun on receipt of the samples of processed animal protein or on the first working day which allows the following method to be completed. If the test is not begun on the day of receipt the sample shall be stored in a refrigerator until required. If the sample has been refrigerated it shall be removed from the refrigerator and stored at room temperature for at least four hours before the test is started.
