

SCHEDULE 2

TARGET VALUES AND LONG-TERM OBJECTIVES FOR OZONE CONCENTRATIONS IN AMBIENT AIR

PART II

TARGET VALUES FOR OZONE

<i>Parameter</i>	<i>Target value for 2010^(a)</i>
1. Target value for the protection of human health Maximum daily 8-hour mean ^(b)	120 µg/m ³ not to be exceeded on more than 25 days per calendar year averaged over three years ^(c)
2. Target value for the protection of human health AOT 40, calculated from 1H values from May to July	18,000 µg/m ³ .h averaged over five years ^(c)

- (a) Compliance with target values will be assessed as of this value. That is, 2010 will be the first year the data for which is used in calculating compliance over three or five years, as appropriate.
- (b) The maximum daily 8-hour mean concentration shall be selected by examining 8 hour running averages, calculated from hourly data and updated each hour. Each 8 hour average so calculated shall be assigned to the day on which it ends, that is, the first calculation period for any one day shall be the period from 1700 on the previous day to 0100 on that day; the last calculation period for any one day will be the period from 1600 to 2400 on the day.
- (c) If the three or five year averages cannot be determined on the basis of a full and consecutive set of annual data, the minimum annual data required for checking compliance with the target values shall be as follows:—
- (i) for the target value for the protection of human health, valid data for one year; and
 - (ii) for the target value for the protection of vegetation, valid data for three years.
