The Private Water Supplies (Scotland) Regulations 2006

PART VIII

**TYPE B SUPPLIES: RISK ASSESSMENTS,
INVESTIGATIONS AND MONITORING**

Investigations: Table D of Schedule 1 microbiological and chemical parameters

28.—(1) Where a monitoring local authority has reason to believe that a Type B supply fails, or is likely to fail, to satisfy a requirement of regulation 7(3), that authority may take such steps as it considers necessary to identify the following matters—

- (a) the cause and extent of the failure, or as the case may be, the apprehended failure;
- (b) the microbiological and chemical parameters listed in Table D of Schedule 1 in respect of which the prescribed specification has not been, or is unlikely to be, achieved; and
- (c) in relation to each parameter so identified, whether the failure, or apprehended failure, to achieve the prescribed specification is attributable to—
 - (i) the domestic distribution system;
 - (ii) the maintenance of that system; or
 - (iii) neither of those matters.

(2) As soon as reasonably practicable after the matters specified in paragraph (1) have been identified, the monitoring local authority shall notify the relevant person and the appropriate local authority of those matters and of the steps that the authority considers it is necessary or desirable to take in the interests of health.

(3) As soon as reasonably practicable after the relevant person receives notification given under paragraph (2), that person shall notify in writing every consumer, if any, of that supply likely to be affected by the matters specified in paragraph (1) of the cause and effect of the failure or, as the case may be, the apprehended failure, and shall provide to those consumers, details of the steps (if any) specified in accordance with paragraph (2).
