

## SCHEDULE 5

### Minimum number of sampling points

## PART 3

### Group B pollutants

#### **Point sources**

6. For the assessment of pollution in the vicinity of point sources, the number of sampling points for fixed measurement shall be determined taking into account emission densities, the likely distribution patterns of ambient air pollution and potential exposure of the population. The sampling points should shall be sited such that the application of the measures referred to at regulation 7(2) (b) can be monitored.
