What is the problem under consideration? Why is government intervention necessary? The existing regulations which relate to certain measuring instruments used for the dispense of intoxicating liquor such as spirits do not benefit from the Measuring Instrument Directive provision, applicable to capacity serving measures (e.g. beer glasses) used for the dispense of draught beer and cider, in that every instrument must be tested before it is placed on the market rather than accepting the results of tests on a sample from a batch as demonstrating compliance for the whole batch. This requirement is disproportionate

and imposes unnecessary costs on the relevant businesses.

What are the policy objectives and the intended effects?

The change will enable manufacturers and other verifiers to stamp instruments as fit for placing on the market at a lower cost than the current requirement for 100% testing without reducing the accuracy of the measures. The legislation is optional and there is no requirement to make any changes from existing practice unless there are sufficient cost savings to outweigh any additional set-up costs associated with quality control procedures.

What policy options have been considered? Please justify any preferred option.

Option One - make the proposed Amendment Regulations. This is the preferred option - it would broadly align the verification activities of the Regulations applicable to certain intoxicating liquor measuring instruments with the requirements applicable to capacity serving measures.

Option Two - continue with the present situation resulting in dispropried to costs for measuring instruments for intoxicating liquor when compared with those applicable to capacity serving measures.

When will the policy be reviewed to establish the actual costs and benefits and the achievement of the desired effects? The National Measurement Office (NMO) reviews its legislation on a 3-5 year cycle and will conduct a Post-Implementation Review. NMO holds regular discussions with weights and measures representatives of LACORS and with manufacturers on an ad hoc basis

<u>Ministerial Sign-off</u> For final proposal/implementation stage Impact Assessments:

I have read the Impact Assessment and I am satisfied that, given the available evidence, it represents a reasonable view of the likely costs, benefits and impact of the leading options.

Signed by the responsible Minister:

Lord Drayson	Date: 3rd September
2009

Evidence Base (for summary sheets)

[Use this space (with a recommended maximum of 30 pages) to set out the evidence, analysis and detailed narrative from which you have generated your policy options or proposal. Ensure that the information is organised in such a way as to explain clearly the summary information on the preceding pages of this form.]

Impact Assessment for the Measuring Equipment (Intoxicating Liquor) (Amendment) Regulations 2009

1. Introduction

This assessment estimates the costs and benefits of the Measuring Equipment (Intoxicating Liquor) (Amendment) Regulations 2009 Regulations ("the proposed Regulations").

2. Purpose and intended effect

2.1 Objective

2.1.1 The proposed Regulations are being produced to amend the Measuring Equipment (Intoxicating Liquor) Regulations 1983. The proposed amendments are specifically intended to align the provisions relating measuring instruments used to deliver intoxicating liquor (other than capacity serving measures) but excluding measuring systems such as beer meters - defined as any measuring equipment containing a fixed chamber (or chambers) which measures a pre-set nominal quantity by capacity), the same nominal capacity and the same manufacturer - with the corresponding provisions of the regulations which implemented the Measuring Instruments Directive (MID) in 2006 in relation to capacity serving measures. This would permit relevant businesses, as approved verifiers, to verify instruments following statistical sampling rather than testing every instrument as is already permissible for capacity serving measures.

2.2 Background

2.2.1 NWML conducted a Prescription Review of all its secondary legislation on measuring instruments made under the Weights and Measures Act 1985 and the European Communities Act 1972 in the period November 2007 to February 2008.

2.2.2 The responses to the consultation included a request from business (a small manufacturer) for an amendment to the existing regulations to permit statistical sampling to replace 100% testing to establish the accuracy of measuring instruments for intoxicating liquor. The facility for statistical sampling is already available to capacity serving measures, such as beer glasses, under regulations implementing the Measuring instruments Directive (the MID). Accordingly a further consultation was issued on the proposal. The consultation document is available from

http://www.nmo.bis.gov.uk/fileuploads/Docs/Legislation/Intoxicating%20liquor/Final_NWML_condocfinal_ Intox_liq_Mar_09.pdf

3. Options

Summary

	Option 1		Option 2		
	Mak	e proposal	Do nothing		
	Per Firm	Total	Per Firm	Total	
	£	£	£	£	
Costs – One-off	1,900	1,900-9,750	N/A	0	
First Year only		based on one firm only assuming up to 5			
Costs – Annual	0	0	16,500	Opportunity cost of 16,500 – 82,500 based on one firm only assuming up to 5	
Benefits - Annual	15,000 based on one firm only	Up to 75,000 based on one firm only assuming up to 5	N/A	0	

3.1 Option One – make the proposed Regulations

3.1.1 Making the proposed Regulations would broadly align the verification activities of the Measuring Equipment (Intoxicating Liquor) Regulations 1983 available to certain suitable measuring instruments with the MID provisions in the Measuring Instruments (Capacity Serving Measures) Regulations 2006

available to manufacturers of capacity serving measures and thereby bring the former Regulations up to date. The provisions do not apply to beer meters etc for which statistical sampling is not appropriate because accuracy can only be established after the instrument has been properly installed.

3.2 Option Two – do nothing

3.2.1 Doing nothing would mean continuing with the present situation whereby the regime applicable to capacity serving measures is less costly than that available to all other measuring instruments used for alcoholic beverages. In the current market with modern reliability of manufacture, testing every instrument is unnecessary and changing to statistical sampling will present little risk of any increase in inaccurate measurement for the consumer. The costs of compliance with present regulations can therefore be demonstrated to be disproportionately and unnecessarily high.

4. Recommendation

4.1 It is recommended that Option One be followed. This will result in resource cost savings for business by permitting statistical sampling, and much of the resource saving is likely to accrue to customers e.g. the licensed trade. This is in line with government policy to reduce burdens on business wherever possible.

5. Costs and benefits

Sectors and groups affected

5.1 Local Weights and Measures Authorities and approved verifiers i.e. manufacturers, installers and repairers .

Benefits

5.2 The benefits of Option One are due to the reduction in the amount of testing required and the cost savings derived from that reduction. These are assessed to be approximately £15,000 per business per year and up to 5 businesses affected giving an annual total of up to £75,000 and that the new provisions would be broadly consistent with current provisions under the MID Regulations. [See the Small Firms Impact Test and the Competition Assessment below for more about the efficiency savings for industry from the proposed new arrangements.]

5.3 Option Two overall has no perceived benefits. It would leave manufacturers of relevant measuring instruments at a financial disadvantage compared with manufacturers of capacity serving measures who benefit from the less rigorous testing procedures under the MID Regulations.

5.4 Option One has transitional costs, due to the change from 100% testing to statistical sampling, of approximately £1,900 per firm, but there are no additional annual costs incurred. Transitional costs may include rewriting the quality system, new items required for the process (e.g. signage/labels), implementing the new process, initial post-implementation audit. [See the Small Firms Impact Test and the Competition Assessment below for more about the costs to industry from the proposed new arrangements.] One manufacturer foresaw increased costs of £7,500 per annum but NMO believes this resulted from a misunderstanding of the optional nature of the change which would only require costs to be incurred where an advantage was perceived. Therefore these figures have been disregarded. NMO also recognises the concern expressed by one local authority about the potential loss of income arising from the potential reduction of the number of tests carried out. However NMO considers that the change would be cost neutral because any loss in fees would be balanced by the reduction of time taken to carry out such testing.

6. Analysis and Evidence

6.1 There is sound evidence of cost savings based on the figures provided by one of up to six companies in relation to spirit measuring devices

6.2 A more accurate estimate of the overall resource costs savings from the measure could only be made with fuller unit cost information from other verifiers of similar spirit measuring instruments or any other identified alternative instruments for which the proposed change is suitable.

6.3 The evidence indicates modest net benefits but work to verify these would by disproportionate to the level of benefits expected.

6.4 For a summary of the costs and benefits of this proposal compared to the current situation, see the table below at paragraph 3.

7. Statutory Specific Impact Tests

After initial screening as to the potential impact of these Regulations on race, disability and gender equality, it has been decided that there will be no impact upon minority groups in terms of numbers affected or the seriousness of the likely impact. The Regulations are not expected to have any impact on the Convention Rights of any person or class of persons.

8. Small Firms Impact Test (SFIT)

The majority of manufacturers in this sector fall within the definition of a "small manufacturer" and so all the costs and benefits identified will apply to a small firm. The previous consultation indicated that the proposal is welcomed by small firms.

9. Competition Assessment

The Competition Assessment was undertaken with regard to the initial verification market. This is divided between a number of small businesses conducting Approved Verification and others who choose the option of third party verification by local authority trading standards officers. The potential savings are available to business. Statistical sampling of the instruments will enable businesses to get the measuring instruments to market more quickly and avoid any delays, improving the environment for competition in this respect.

10. Rural proofing

The proposed Regulations have been scrutinised with the Countryside Agency's rural proofing checklist in mind. No instance of the proposed Regulations impacting upon rural communities or areas has been identified.

11. Carbon Assessment, Other Environment, Health Impacts

Assessment of these indicates that there is no impact in these areas.

12. Enforcement, sanctions and monitoring

12.1. Enforcement of the 1983 Regulations would continue to be carried out on the basis of risk-based inspection by the 200+ local Weights and Measures Authorities based across Great Britain which currently undertake this activity. The proposed amendment would not change the enforcement regime but would mean that all inspectors as well as approved verifiers would be able to test and verify instruments on the basis of a statistical sample.

12.2 It is intended to monitor the effectiveness of the proposed Regulations, and this would be done in conjunction with industry and the Inspectorate. The National Measurement Office holds regular discussions with the weights and measures representatives of the LACORS (Local Authorities Coordinators of Regulatory Services and the Trading Standards Institute twice a year, and with the manufacturers on an ad hoc basis.

12.3 The National Measurement Office (NMO) reviews its legislation on a 3-5 year cycle, and will conduct a post-implementation review. NMO holds regular discussions with weights and measures representatives of LACORS and with manufacturers on an ad hoc basis.

13. Implementation and delivery plan

- The proposed Regulations have been updated in the light of the consultation response.
- The Regulations will enter into force on 1 October 2009, a Common Commencement Date.

• The National Measurement Office has issued guidance to businesses on the proposed amendment to the 1983 Regulations to enable business to prepare for the implementation of this new legislation.
