Date: 22.3.1.

What is the problem under consideration? Why is government intervention necessary?

The EC Regulation on Credit Rating Agencies (CRAs) applies from 7 December 2009. The EC Regulation is a Community harmonising measure. It is intended to create a common regulatory approach to credit ratings in the EU.

The rationale for the SI is that the EC Regulation provides for certain national implementing measures (eg on penalties), and they ensure that the EC Regulation is fully effective and enforceable in the UK.

What are the policy objectives and the intended effects?

The benefits of designating the FSA as competent authority and drawing upon an established enforcement process, penalties, and appeal process is that it gives legal and regulatory certainty to CRAs who will then be dealing with a well established body and enforcement regime. This will be the least costly option for CRAs who may otherwise have to pay higher fees to establish a new oversight body.

What policy options have been considered? Please justify any preferred option.

Option 1: Designate FSA as competent authority

Option 2: Designate a different competent authority to the FSA or create a new body Option 3: Do nothing.

The preferred option is to designate the FSA as the competent authority i.e option 1. It is possible that this role may be taken over by the proposed European Securities & Markets Authority (ESMA) on 1 January 2011.

When will the policy be reviewed to establish the actual costs and benefits and the achievement of the desired effects?

The Committee of European Securities Regulators (CESR) will publish an annual report on the application of the EC Regulation by December 2010.

Ministerial Sign-off For consultation stage Impact Assessments:

I have read the Impact Assessment and I am satisfied that, given the available evidence, it represents a reasonable view of the likely costs, benefits and impact of the leading options.

Ensure that the information is organised in such a way as to explain clearly the summary information on the preceding pages of this form.]

#### 1. BACKGROUND

Some Credit Rating Agencies in the EU are already subject to the External Credit Assessment Institution (ECAI) regime. Credit ratings may be used for regulatory capital purposes under the Capital Requirements Directive only if the CRA has been recognised under the ECAI regime. ECAIs are recognized as eligible for that purpose by regulatory authorities such as the FSA.

However CRAs were strongly criticised for their role in the market turmoil of 2008, and the Commission under the French Presidency pushed for an EU regulatory response. The Commission consulted on an EU registration regime for CRAs, together with supervisory oversight and enforcement, and a proposed Regulation was published on 12 November 2008.

The Credit Rating Agency Regulation (EC) No 1060/2009 was published on 17 November 2009 and entered into force on 7 December 2009. In summary, it:

- Introduces a harmonised approach to the regulation of credit rating activities in the European Union.
- Establishes a registration system for credit rating agencies.
- Requires registered agencies to comply with various provisions relating to independence, conflicts of interest, employees and analysts, methodologies and models, outsourcing, and disclosure and presentation of information.
- Requires specified financial institutions to use credit ratings for regulatory purposes only
  if they have been issued or endorsed by a registered CRA, or issued by an overseas
  agency that has been certified in accordance with the Regulation.

The Regulation is directly applicable, which means it is binding in its entirety and has legal effect in the UK without needing to be transposed. However, the CRA Regulation provides for national implementation, for example to deal with matters such as penalties, enforcement procedures and appeals from registration decisions. This impact assessment, and accompanying evidence base, deals only with the UK Statutory Instrument.

#### **ESMA**

It is possible that the European Securities and Markets Authority (ESMA) will supervise CRAs as from January 2011. There may be additional costs for the industry when this happens although these are not quantifiable at this time. It is expected that the FSA will continue to play a part in the oversight of CRAs going forward.

#### POLICY OPTIONS

We have looked at three options in considering how best to approach the implementation of the national measures.

#### OPTION 1 – Designating the FSA as competent authority

#### Benefits

Designating the FSA as competent authority clearly brings benefits to the regulation of CRAs. It is difficult to quantify such a benefit, but due consideration should be given to using the existing enforcement regime and the specialist staff and knowledge at the FSA. This translates to good and proper regulation of CRAs and therefore to the maintenance of market confidence, and, ultimately, to investment in the marketplace.

#### <u>Costs</u>

The FSA estimate that they will spend £262,500 on the regulation of CRAs from June 2010 to January 2011. This cost comprises policy, legal and enforcement resource and is inclusive of both personnel cost and all staff overheads such as facilities, premises, travel and using the existing FSA infrastructure. In addition, the FSA estimate that ongoing annual costs may be around £450,000 as it is expected that CRAs will still have to pay annual fees to the FSA who will continue to have an oversight role after the establishment of ESMA.

Costs incurred by the establishment of ESMA are as yet unquantifiable. However, they will be the same costs incurred independent of which policy option in this evidence base is chosen as the creation of ESMA is independent of our approach to UK implementation.

OPTION 2- Designating a different body as competent authority or creating a new competent authority to take on the role of regulating CRAs.

#### **Benefits**

The benefits of creating a new body as competent authority would, in theory, be the same as the benefits described in Option 1. CRAs would be subject to proper regulation and market confidence would benefit as a result.

#### <u>Costs</u>

It is estimated that it would cost at least £1.5m to establish a new body with the necessary supervisory, policy and authorisation experience to conduct the registration of CRAs. This cost is an estimated one, but it is clear in principle that the costs of establishing a new body would be higher than having an existing body take on the role. The cost of this option would therefore be significantly higher than the costs incurred in Option 1 and this would most probably be reflected in the level of fees CRAs would be expected to pay.

The conclusion can be reached that option 2 would present significantly higher costs than option 1. In addition, it is an implicit assumption of the EC Regulation that the competent authority be a member of the Committee of European Securities Regulators (CESR). The FSA is the only UK member of CESR. Option 2 does not therefore appear to be a viable option.

**OPTION 3 – Do nothing** 

Under this option, the UK would not implement the national measures to deal with matters such as designating a competent authority, penalties, enforcement procedures, and appeals. In principle, not implementing regime change is frequently considered as part of an evidence base so that the costs and benefits of each option can be compared.

#### **Benefits**

Costs incurred by the industry and indeed the FSA are likely to be less than under options 1 and 2. It is debatable as to whether they would actually reduce to zero due to the direct applicability of the European regulation.

Benefits to industry and market confidence would be substantially reduced from option 1 and 2, as there would not be a system of proper regulation of CRAs.

#### <u>Costs</u>

The UK would run the risk of infraction proceedings if national measures are not implemented. Other member states are implementing the regulation and so the UK would possibly be put at a disadvantage competitively.

Option 3 is not therefore a viable option.

#### 4. COMPETITION ASSESSMENT

The UK SI will have no effect on competition

5. IMPACT ON SMALL FIRMS

There will be no impact on small firms

#### 6. EQUALITY ASSESSMENTS

The legislation should have no impact on race, disability, gender equality.

#### 7. HUMAN RIGHTS

The legislation will have no impact on human rights

## Specific Impact Tests: Checklist

Use the table below to demonstrate how broadly you have considered the potential impacts of your policy options.

Ensure that the results of any tests that impact on the cost-benefit analysis are contained within the main evidence base; other results may be annexed.

Type of testing undertaken	Results in Evidence Base?	Results annexed?	
Competition Assessment	Yes	No	
Small Firms Impact Test	Yes	No	
Legal Aid	No No	No
