1990 No. 2179

The Building Standards (Scotland) Regulations 1990

PART II

BUILDING STANDARDS

Miscellaneous hazards

28.—(1) Subject to paragraph (2), every system in which heated water is stored in a building (irrespective of whether the water is heated in the system) and which does not incorporate a ventilating pipe open to the atmosphere shall be so constructed as to provide adequate protection from malfunctions of the system.

(2) This regulation shall not apply to—

- (a) any system in which the storage capacity for heated water does not exceed 15 litres;
- (b) any parts of a system which are used solely for space heating;
- (c) any system used for an industrial or commercial process.
