

SCHEDULE 9

WRAPPING AND PACKAGING

6. Sealing shall be carried out in the dairy establishment in which the last heat-treatment of drinking milk or liquid milk-base products has been carried out, immediately after filling, by means of a sealing device which ensures that the milk is protected from any adverse effects of external origin on its characteristics. The sealing device shall be so designed that once the container has been opened, the evidence of opening remains clear and easy to check.
