

SCHEDULE 3  
ENGINEERING PLANT

PART 2  
CONSTRUCTION

*Braking requirements*

- 7.—(1) Any other engineering plant must be fitted with—
- (a) an efficient brake capable of braking the vehicle at the maximum weight permitted under paragraphs 17 to 19 when travelling at the maximum speed permitted by this Schedule; and
  - (b) an efficient parking brake capable of holding the vehicle stationary when necessary.
- (2) In the case of engineering plant that is a motor vehicle propelled by steam—
- (a) the requirements of sub-paragraph (1)(a) are to be treated as met if the vehicle has an engine capable of being reversed; and
  - (b) the requirements of sub-paragraph (1)(b) are to be treated as met if the engine can be set to hold the vehicle stationary.
- (3) Where engineering plant cannot be fitted with a parking brake on account of the nature of the engineering operations that it is specially designed and constructed to carry out, the requirements of sub-paragraph (1)(b) are to be treated as met if suitable scotches (or similar devices capable of holding the vehicle stationary when necessary) are fitted.
