

SCHEDULE 6

Additional conditions that apply to the keeping of calves confined for rearing and fattening

Additional dietary requirements

10.—(1) All calves must be provided with food which contains sufficient iron to ensure a blood haemoglobin level of at least 4.5 mmol/litre.

(2) A minimum daily ration of fibrous food must be provided for each calf over 2 weeks old, the quantity being raised in line with the growth of the calf from a minimum of 100g at 2 weeks old, to a minimum of 250g at 20 weeks old.
