Notes:				

<sup>(1)</sup> The water should not be aggressive.

<sup>(2)</sup> Where treatment to reduce the level of radionuclides in water intended for human consumption has been taken, monitoring must be carried out to ensure the continued efficacy of the treatment.

<sup>(3)</sup> Remedial action may be taken by the Welsh Ministers on radiological protection grounds without further consideration and deemed to be justified where radon concentrates exceed 1,000 Bq/1.

<sup>(4)</sup> If tritium concentration exceeds its parametric value, an investigation (which may include analysis) of the presence of artificial radionuclides is required.

<sup>(5)</sup> May be monitored from samples of water leaving treatment works or other supply point, as no significant change during distribution.
