

Commission Implementing Regulation (EU) 2019/2072 of 28 November 2019 establishing uniform conditions for the implementation of Regulation (EU) 2016/2031 of the European Parliament and the Council, as regards protective measures against pests of plants, and repealing Commission Regulation (EC) No 690/2008 and amending Commission Implementing Regulation (EU) 2018/2019

COMMISSION IMPLEMENTING REGULATION (EU) 2019/2072

of 28 November 2019

establishing uniform conditions for the implementation of Regulation (EU) 2016/2031 of the European Parliament and the Council, as regards protective measures against pests of plants, and repealing Commission Regulation (EC) No 690/2008 and amending Commission Implementing Regulation (EU) 2018/2019

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EU) 2016/2031 of the European Parliament and the Council of 26 October 2016 on protective measures against pests of plants, amending Regulations (EU) No 228/2013, (EU) No 652/2014 and (EU) No 1143/2014 of the European Parliament and of the Council and repealing Council Directives 69/464/EEC, 74/647/EEC, 93/85/EEC, 98/57/EC, 2000/29/EC, 2006/91/EC and 2007/33/EC⁽¹⁾, and in particular Article 5(2), Article 32(2), Article 37(2), Article 37(4), Article 40(2), Article 41(2), Article 53(2), Article 54(2), Article 72(1), Article 73, Article 79(2) and Article 80(2) thereof,

Whereas:

- (1) Regulation (EU) 2016/2031 is to apply from 14 December 2019. In order for its provisions to become fully effective, implementing rules are to be adopted regulating the pests, plants, plant products and other objects, as well as respective requirements needed to protect the Union territory from phytosanitary risks.
- (2) In view of this, specific rules should be set out in order to list the Union quarantine pests, the protected zone quarantine pests and the Union regulated non-quarantine pests, as well as measures to prevent their presence in the respective territories of the Union or on plants for planting.
- (3) The pests listed in Part A of Annex I to Council Directive 2000/29/EC⁽²⁾ and Section I of Part A of Annex II to that Directive have been reassessed by the European Food Safety Authority (EFSA) in order to set up the list of Union quarantine pests pursuant to Article 5 of Regulation (EU) 2016/2031. The reassessment was necessary to update the phytosanitary status of those pests in accordance with the most recent technical and scientific developments, and also to assess their compliance with the criteria of Article 3 of that Regulation in respect of the Union territory and Section 1 of Annex I thereto.
- (4) As a result of that reassessment, some pests listed in Annexes I and II to Directive 2000/29/EC should not be included in the list of Union quarantine pests because they

Changes to legislation: Commission Implementing Regulation (EU) 2019/2072 is up to date with all changes known to be in force on or before 16 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details)

- do not fulfil the conditions provided for in Article 3 of Regulation (EU) 2016/2031 in respect of the Union territory.
- (5) Certain other pests, some of which are listed in Annexes I and II to Directive 2000/29/EC, have been found to fulfil the conditions provided for in Article 3 of Regulation (EU) 2016/2031 in respect of the Union territory, therefore they should be included in the list of Union quarantine pests.
 - (6) As a result of the reassessment, some of the pests listed in Annexes I and II to Directive 2000/29/EC as pests not known to occur in the Union territory, should be included in the list of Union quarantine pests as pests known to occur in the Union territory, due to their established presence in certain parts of it.
 - (7) The names of certain pests should be updated to reflect the latest developments of the international nomenclature. Those pests are to be listed together with the respective codes assigned by the European and Mediterranean Plant Protection Organisation ('EPPO'). This is necessary to ensure the identification of those pests, even in case of potential change of their names in the future.
 - (8) The protected zones recognised in accordance with Commission Regulation (EC) No 690/2008⁽³⁾ and the respective pests listed in Part B of Annex I and Part B of Annex II to Directive 2000/29/EC have been reassessed by the Commission. The purpose of that reassessment was to conclude whether the respective pests correspond to the description of protected zone quarantine pest in Article 32(1) of Regulation (EU) 2016/2031.
 - (9) That reassessment has been based on the respective applications by Member States to recognise, amend or revoke protected zones, regular survey reports submitted by the Member States, Commission inspections and several other scientific and technical data.
 - (10) Certain pests, some of which are listed in Annexes I and II to Directive 2000/29/EC, have been found to fulfil the conditions provided for in Article 32(1) of Regulation (EU) 2016/2031, therefore they should be included in the list of protected zone quarantine pests. Those pests should be listed together with the respective codes assigned by EPPO, in order to ensure the identification of those pests, even in case of potential change of their names in the future.
 - (11) Regulation (EC) No 690/2008 should be repealed to avoid overlaps with the listing of protected zones in this Regulation.
 - (12) EPPO has made a reassessment of the pests listed in Section II of Part A of Annex II to Directive 2000/29/EC, the crops under point 3 and the pests under point 6 of Annex I to Directive 66/401/EEC⁽⁴⁾, as well as the pests under point 3 of Annex II to Council Directive 66/402/EEC⁽⁵⁾, Annex I to Council Directive 68/193/EEC⁽⁶⁾, as well as the pests listed in the acts adopted pursuant to Article 5(5) of Council Directive 98/56/EC⁽⁷⁾, Annex II to Council Directive 2002/55/EC⁽⁸⁾, Annex I and point B of Annex II to Council Directive 2002/56/EC⁽⁹⁾, and the acts adopted pursuant to point (c) of Article 18 of that Directive, point 4 of Annex I and point 5 of Part I of Annex II to Council Directive 2002/57/EC⁽¹⁰⁾, the acts adopted pursuant to Article 4 of Council Directive 2008/72/EC⁽¹¹⁾ and the acts adopted pursuant to Article 4 of Council Directive 2008/90/EC⁽¹²⁾.

- (13) That reassessment was necessary to update the phytosanitary status of those pests in accordance with the most recent technical and scientific developments, and also to assess their compliance with the respective criteria of Article 36 of Regulation (EU) 2016/2031, in respect of the Union territory, and Section 4 of Annex I thereto.
- (14) Certain pests, some of which are listed in those Directives, have been found to fulfil the conditions provided for in Article 36 of Regulation (EU) 2016/2031 in respect of the Union territory, and should therefore be included in the list of Union regulated non-quarantine pests ('RNQPs'). In accordance with Article 37(7) of that Regulation, that list is to provide for specific categories of relevant plants for planting referred to in Directives 66/401/EEC, 66/402/EEC, 68/193/EEC, 2002/55/EC, 2002/56/EC, 2002/57/EC, 2008/72/EC and 2008/90/EC.
- (15) In certain cases, the respective plants for planting should not be introduced into, or moved within, the Union territory if the presence of the RNQPs or symptoms caused by RNQPs on them is above a certain threshold, as set out in Article 37(8) of Regulation (EU) 2016/2031. As set out further by that Article, that threshold is only to be set where it is possible for professional operators to ensure that the incidence of that RNQP on those plants for planting does not exceed that threshold and it is possible to verify whether that threshold is not exceeded in lots of those plants for planting.
- (16) In accordance with Article 37(4) of Regulation (EU) 2016/2031, measures to prevent the presence of RNQPs on the plants for planting concerned, are to apply without prejudice to the measures adopted pursuant to Directives 66/401/EEC, 66/402/EEC, 98/56/EC, 1999/105/EC, 2002/54/EC, 2002/55/EC, 2002/56/EC, 2002/57/EC, 2008/72/EC and 2008/90/EC. Therefore, this Regulation should not affect the measures, adopted pursuant to those Directives, concerning inspections, sampling and testing of the plants for planting concerned, or the plants from which they originate, the origin of the plants for planting concerned from areas or sites free from, or with physical protection from, the RNQPs concerned, treatments of the plants for planting concerned, or the plants from which they originate, or the production of the plants for planting.
- (17) Moreover, the provisions of this Regulation concerning RNQPs should not affect the exceptions for plants for planting, adopted pursuant to those Directives, from marketing requirements set out by those Directives concerning the supply of seed to official testing and inspection bodies, the supply of plants to providers of certain services, the movement of plants intended for scientific purposes, selection work, other tests or trial purposes, seed not finally certified, seeds subject to the exceptions of the provisions of Implementing Decision (EU) 2017/478⁽¹³⁾ and plants shown to be intended for export.
- (18) The introduction into the Union of the plants, plant products and other objects, from all or certain third countries, as listed in Part A of Annex III to Directive 2000/29/EC is prohibited.
- (19) Those plants, plants products and other objects have been reviewed on the basis of any new evidence, their pest risk for the Union territory and the update of the list of Union quarantine pests.

Status: Point in time view as at 31/12/2020.

Changes to legislation: Commission Implementing Regulation (EU) 2019/2072 is up to date with all changes known to be in force on or before 16 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details)

- (20) On the basis of that review, certain of those plants, plant products and other objects are therefore to be listed pursuant to Article 40(2) of Regulation (EU) 2016/2031, together with the third countries, groups of third countries or specific areas of third countries to which that prohibition applies. Such prohibition is necessary because the phytosanitary protection of the Union cannot be guaranteed by applying less stringent measures in this regard.
- (21) In view of the reassessment of Union quarantine pests, new provisions for the introduction into the Union of certain plants, plant products and other objects, and the respective special requirements, and provisions for the movement within the Union of certain plants, plant products and other objects, and the respective special requirements should be adopted pursuant to Article 41(2) of Regulation (EU) 2016/2031.
- (22) The indication of CN codes should not be obligatory for the listing of the plants, plant products and other objects subject to special requirements for movement within the Union territory. This would be a proportionate approach because the CN codes are only necessary for the identification of those plants, plant products or other objects when they are introduced into the Union from a third country. Such approach would be also be in line with Article 80 of Regulation (EU) 2016/2031 pursuant to which no such codes are provided for the listing of those plants, plant products and other objects, for which a plant passport is required.
- (23) The introduction of plants, plant products and other objects is prohibited in their respective protected zones and, where applicable, with regard to their third country of origin, as listed in Part B of Annex III to Directive 2000/29/EC. Moreover, the plants, plant products and other objects, as listed in Part B of Annex IV to Directive 2000/29/EC, may only be introduced into the respective protected zones if they fulfil the respective special requirements.
- (24) Those plants, plant products and other objects have been reviewed on the basis of any new evidence, their pest risk for the respective protected zones and the update of the list of the protected zones quarantine pests and the protected zones.
- (25) On the basis of that review, certain of those plants, plant products and other objects, and the respective protected zones, should be listed in this Regulation as provided for in Article 53(2) of Regulation (EU) 2016/2031, together with the third countries and groups of third countries of origin to which that prohibition applies.
- (26) Moreover, certain of those plants, plant products and other objects, and the respective protected zones and special requirements, should be listed in this Regulation as provided for in Article 54(2) of Regulation (EU) 2016/2031.
- (27) A list of plants, plant products and other objects for which a phytosanitary certificate is required for introduction into the Union territory, and the respective third countries of origin or dispatch, is to be established pursuant to Article 72(1) of Regulation (EU) 2016/2031.
- (28) Implementing Regulation (EU) 2018/2019 requires a phytosanitary certificate for the introduction into the Union territory of plants, other than the plants included in the

list referred to in Article 72(1), pursuant to the first subparagraph of Article 73 of Regulation (EU) 2016/2031. However, certain fruits have been found to fulfil the criteria set out in Annex VI to Regulation (EU) 2016/2031 and identified as plants which do not require a phytosanitary certificate. A phytosanitary certificate should therefore not be required for the introduction into the Union of the fruits listed in Annex II of Implementing Regulation (EU) 2018/2019.

- (29) For reasons of clarity, Article 2 and Annex II of that Regulation should be deleted, in order to avoid overlaps with this Regulation.
- (30) A list of plants, plant products and other objects for which a phytosanitary certificate is required for introduction into the respective protected zones and the respective third countries of origin or dispatch, is to be established pursuant to Article 74(1) of Regulation (EU) 2016/2031. Such a list will help to ensure clarity for the professional operators, competent authorities and all of other users of those plants, plant products and other objects.
- (31) A list of plants, plant products and other objects for which a plant passport is required for movement within the Union territory is to be established pursuant to Article 79(1) of Regulation (EU) 2016/2031. Such a list will help to ensure clarity for the professional operators, competent authorities and all other users of those plants, plant products and other objects.
- (32) In order to refrain from imposing requirements on professional operators, those plant passports should not be required for the movement of seeds which are subject to derogations from the requirements of the respective Directives on the marketing of seeds. This is appropriate as this Regulation applies without prejudice to the measures adopted pursuant to those Directives and should not introduce for the professional operators additional certification burdens than the ones currently laid down in those Directives obligations.
- (33) A list of plants, plant products and other objects for which a plant passport is required for being introduced into, or moved within, certain protected zones is to be established pursuant to Article 80(1) of Regulation (EU) 2016/2031. Those plant passports should bear the designation 'PZ' to be distinguished from the plant passports required for the movement within the entire Union territory. Such a list will help to ensure clarity for the professional operators, competent authorities and all other users of those plants, plant products and other objects.
- (34) In order to avoid the disruption of trade by changes in the requirements regarding RNQPs, a limited transitional period should be granted for seeds and other plants for planting that have already been produced in the Union, introduced into the Union or moved within the Union in accordance with the requirements concerning the presence of RNQPs applicable before 14 December 2019, the date of application of this Regulation. Those seeds and other plants for planting may continue to be introduced into, or moved within, the Union in accordance with those requirements for a limited period of time. It would also be proportionate to require that plant passports would only attest the compliance of those seeds and other plants for planting with the applicable requirements on Union quarantine pests, protected zone quarantine pests and measures adopted

Status: Point in time view as at 31/12/2020.

Changes to legislation: Commission Implementing Regulation (EU) 2019/2072 is up to date with all changes known to be in force on or before 16 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details)

pursuant to Article 30 of Regulation (EU) 2016/2031. Such an approach would be necessary given the big amounts of seeds and other plants for planting which are in the course of production, or have been produced, before 14 December 2019, under the rules of the Directives on the marketing of seeds and other propagating material applicable before that date and when no plant passports were required concerning the presence of RNQPs. Those plants for planting have already been certified and it would be disproportionate to require their further certification under the new rules. A transitional period of one year would thus be necessary to ensure the smooth uptake of those plants for planting by the market and to facilitate the competent authorities and the professional operators to adapt to the new rules.

- (35) This Regulation should enter into force on the third day following that of its publication in the *Official Journal of the European Union*, to allow for the competent authorities and the professional operators the longest possible time to prepare for its application.
- (36) For reasons of legal certainty, this Regulation should apply from the same date as Regulation (EU) 2016/2031, which is 14 December 2019.
- (37) The measures provided for in this Regulation are in accordance with the opinion of the Standing Committee on Plants, Animals, Food and Feed,

2 [^{F18}Nothing in Annex 4 or 5 shall affect the application of the requirements specified in retained EU law which transposed the provisions in] Directives 66/401/EEC, 66/402/EEC, 68/193/EEC, 98/56/EC, 1999/105/EC, 2002/54/EC, 2002/55/EC, 2002/56/EC, 2002/57/EC, 2008/72/EC and 2008/90/EC concerning:

- a inspections, sampling and testing of the plants for planting concerned or the plants from which they originate;
- b the origin of the respective plants for planting from the areas or sites, which are free from, or with physical protection from, the RNQPs concerned;
- c treatments of the plants for planting concerned, or the plants from which they originate;
- d the production of the plants for planting.

Table of Contents

Part A: RNQPs concerning fodder plant seed

Part B: RNQPs concerning vine propagating material

Part C: RNQPs concerning propagating material of ornamental plants and other plants for planting intended for ornamental purposes

Part D: RNQPs concerning forest reproductive material, other than seeds

Part E: RNQPs concerning vegetable seed

Part F: RNQPs concerning seed potatoes

Part G: RNQPs concerning seed of oil and fibre plants

Part H: RNQPs concerning vegetable propagating and planting material, other than seeds

Part I: RNQPs concerning fruit propagating material and fruit plants intended for fruit production

Part J: RNQPs concerning seeds of *Solanum tuberosum*

Part K: RNQPs concerning plants for planting of *Humulus lupulus*, other than seeds

Interpretation

In this Annex:

‘competent authority’, in relation to plants for planting originating in a third country, means the national plant protection organisation of the country of origin or any official authority or body acting under the supervision of the national plant protection organisation;

‘RNQPs’ means GB regulated non-quarantine pests.

Status: Point in time view as at 31/12/2020.

PART A

Measures to prevent the presence of RNQPs on fodder plant seed

1. Inspection of the crop

1 The competent authority, or the professional operator under the official supervision of the competent authority, must carry out field inspections on the crop from which the fodder plant seed is produced concerning the presence of RNQPs in the crop to ensure that the presence of RNQPs does not exceed the thresholds set out in the table in Part A of Annex 4.

2 For the purposes of point (1), the competent authority may authorise inspectors, other than the professional operators, to carry out the field inspections on its behalf and under its official supervision.

3 Field inspections may only be carried out when the condition and the stage of development of the crop allow for an adequate inspection. At least one field inspection must be carried out each year, at the most appropriate time for the detection of the respective RNQPs.

4 The competent authority must determine the size, the number and the distribution of the portions of the field to be inspected in accordance with appropriate methods.

5 The proportion of the crops for the production of seed to be officially inspected by the competent authority must be at least 5%.

2. Sampling and testing of fodder plant seed

1 The competent authority must:

2 The competent authority or the professional operator under official supervision must sample and test the fodder plant seed in accordance with up-to-date international methods.

3 Except for automatic sampling, the competent authority must check a proportion of at least 5 % of the seed lots entered for official certification.

4 That proportion must be as spread as evenly possible over natural and legal persons entering seed for certification, and the species entered, but may also be aimed at eliminating specific doubts.

5 In the case of automatic sampling, appropriate procedures must be applied and the sampling must be officially supervised.

6 For the examination of seed for certification, samples must be drawn from homogeneous lots and, as regards the lot and sample weights, in accordance with the table in Annex 3 to Directive [66/401/EEC](#).

3.

The competent authority, or the professional operator under the official supervision of the competent authority, must carry out checks and take any other action which is necessary or

PART B

Measures to prevent the presence of RNQPs on propagating material of *Vitis* sp.

The competent authority, or the professional operator under the official supervision of the competent authority, must carry out checks and take any other action which is necessary or appropriate to ensure that the requirements specified in the following table in relation to the respective RNQPs and plants for planting are satisfied:

PART D

Measures to prevent the presence of RNQPs on forest reproductive material, other than seeds

1. Visual inspections

1 The competent authority, or the professional operator under the official supervision of the competent authority, must carry out checks and take any other action which is necessary or appropriate to ensure that the requirements in point (2) are satisfied in respect of forest reproductive material, other than seeds, of *Pinus* spp.

2 The requirements are that the forest reproductive material is found free from *Dothistroma septosporum* upon visual inspection at the production site or place.

3 The visual inspections must take place once a year, in the most appropriate period to detect those pests, taking into account the climatic conditions and the growing conditions of the plant, and the biology of the pest.

2. Other requirements

1 The competent authority, or the professional operator under the official supervision of the competent authority, must carry out checks and take any other action which is necessary or appropriate to ensure that, the requirements in point (2) are satisfied in respect of forest reproductive material of *Pinus* spp.

2 The requirements are that:

PART G

Measures to prevent the presence of RNQPS on seed of oil and fibre plants

1. Inspection of the crop

1 The competent authority, or the professional operator under the official supervision of the competent authority, must carry out field inspections on the crop from which the seed of *Helianthus annuus* L. is produced concerning the presence of *Plasmopara halstedii* (Farlow) Berlese & de Toni in the crop to ensure that the presence of that pest does not exceed the thresholds set out in the table in Part G of Annex 4.

2 For the purposes of point (1), the competent authority may authorise inspectors, other than the professional operators, to carry out the field inspections on its behalf and under its official supervision.

3 Those field inspections must be carried out when the condition and the stage of development of the crop allow for an adequate inspection. At least one field inspection must be carried out each year, at the most appropriate time for the detection of the respective RNQPs.

4 The competent authority must determine the size, the number and the distribution of the portions of the field to be inspected in accordance with appropriate methods.

5 The proportion of the crops for the production of seed to be officially inspected by the competent authority must be at least 5%.

2. Sampling and testing of oil and fibre plants

1 The competent authority must:

2 The competent authority or the professional operator under official supervision must sample and test oil and fibre plants in accordance with up-to-date international methods.

Status: Point in time view as at 31/12/2020.

There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details)

3 Except for automatic sampling, the competent authority must check a proportion of at least 5 % of the seed lots entered for official certification.

4 That proportion must be spread as evenly as possible over natural and legal persons entering seed for certification and the species entered, but may also be aimed at eliminating specific doubts.

5 In the case of automatic sampling, appropriate procedures must be applied and the sampling must be officially supervised.

6 For the examination of seed for certification, samples must be drawn from homogeneous lots and, as regards the lot and sample weights, in accordance with the table in Annex 3 to Directive [66/401/EEC](#).

3.

The competent authority, or the professional operators under the official supervision of the competent authority, must carry out additional inspections and take any other action which is necessary or appropriate to ensure that the requirements specified in the following table in relation to the respective RNQPs and plants for planting are satisfied:

PART H

Measures to prevent the presence of RNQPs on vegetable propagating and planting material, other than seeds

1

The competent authority, or the professional operator under the official supervision of the competent authority, must carry out checks and take any other action which is necessary or appropriate to ensure that:

- a the plants appear at least, on visual inspection, to be practically free from pests listed in the table below, in respect of the genera or species concerned;
- b any plants showing visible signs or symptoms of the pests listed in the table below, at the stage of the growing crop, have been treated properly immediately upon their appearance or, where appropriate, have been eliminated;
- c in the case of bulbs of shallots and garlic, the plants derive directly from material which, at the stage of the growing crop, has been checked and found to be practically free from any pest listed in the table below.

2

In addition, the competent authority, or the professional operator under the official supervision of the competent authority, must carry out checks and take any other action which is necessary or appropriate to ensure that the requirements specified in the following table in relation to the respective RNQPs and plants for planting, are satisfied:

PART I

Measures to prevent the presence of RNQPs on seed of *Solanum tuberosum* L.

The competent authority, or the professional operator under the official supervision of the competent authority, must carry out checks and take any other action which is necessary or appropriate to ensure that the following requirements are satisfied in relation to seed of *Solanum tuberosum*:

- a) the seeds originate in areas where Potato spindle tuber viroid is not known to occur;
- b) no symptoms of diseases caused by Potato spindle tuber viroid have been observed on the plants at the place of production during their complete cycle of vegetation; or
- c) the plants have been subjected to official testing for Potato spindle tuber viroid, on a representative sample using appropriate methods and have been found in those tests to be free from that pest.

PART A

List of plants, plant products and other objects originating in a CD territory or Great Britain and the special requirements for their introduction into Great Britain from a CD territory or their movement within Great Britain

Interpretation

In this Part—

‘relevant PCN provisions’ means—

- i in relation to potatoes produced in England, Part 4 of Schedule 2 to the Official Controls (Plant Health and Genetically Modified Organisms) (England) Regulations 2019 ;
- ii in relation to potatoes produced in Wales, Part 4 of Schedule 2 to the Official Controls (Plant Health and Genetically Modified Organisms) (Wales) Regulations 2020 ;
- iii in relation to potatoes produced in Scotland, paragraphs 4 and 5 of Part 2, and Part 4, of Schedule 2 to the Plant Health (Official Controls and Miscellaneous Provisions) (Scotland) Regulations 2019 ;

‘relevant Potato Wart Disease provisions’ means—

- i in relation to potatoes produced in England, Part 3 of Schedule 2 to the Official Controls (Plant Health and Genetically Modified Organisms) Regulations 2019;
- ii in relation to potatoes produced in Wales, Part 3 of Schedule 2 to the Official Controls (Plant Health and Genetically Modified Organisms) (Wales) Regulations 2020;
- iii in relation to potatoes produced in Scotland, Part 3 of Schedule 2 to the Plant Health (Official Controls and Miscellaneous Provisions) (Scotland) Regulations 2019.
