

SCHEDULE 1

DESCRIPTIONS OF PROCESSES

Chapter 6

Other Industries

Section 6.6

The manufacture of dyestuffs, printing ink and coating materials

Part A

Any process for the manufacture of dyestuffs if the process involves the use of hexachlorobenzene.

Part B

Any process—

- (a) for the manufacture or formulation of printing ink or any other coating material containing, or involving the use of, an organic solvent, where the carrying on of the process by the person concerned at the location in question is likely to involve the use of 200 tonnes or more of organic solvents in any 12 month period;
- (b) for the manufacture of any powder for use as a coating material where there is the capacity to produce 400 tonnes or more of such powder in any 12 month period.

Part C

Any process—

- (a) for the manufacture or formulation of printing ink or any other coating material containing, or involving the use of, an organic solvent, where the carrying on of the process by the person concerned at the location in question is likely to involve the use of 100 tonnes or more but less than 200 tonnes of organic solvents in any 12 month period;
- (b) for the manufacture of any powder for use as a coating material where there is the capacity to produce 200 tonnes or more but less than 400 tonnes of such powder in any 12 month period.

In this section, “coating material” has the same meaning as in section 6.5 and the amount of organic solvents used in a process shall be calculated as—

- (a) the total input of organic solvents into the process, including both solvents contained in coating materials and solvents used for cleaning or other purposes; less
- (b) any organic solvents (not contained in coating materials) that are removed from the process for re-use or for recovery for re-use.
