*Packing*

1. Only apples of one variety shall be packed in any one container.
2. Apples packed in any container shall be so packed that any fruit exposed to view, or which would be exposed to view if the container were opened in the ordinary manner, fairly represents in size, maturity and condition the entire contents of the container.

3. *"B.S.A." Box*

A sheet of corrugated cardboard 17½ inches by 11 inches shall be placed on the bottom of the box with the smooth side next the fruit. Two sheets of good quality lining paper, 17½ inches to 18 inches wide and not less than 23 inches or more than 32 inches long shall be placed in the box in such a way that they cover the bottom and sides of the box and extend sufficiently far above the mouth of the box to cover over the top of the fruit when the box has been filled. In the same way two sheets 11 inches wide and 18 inches long shall be used to cover the ends of the box. The apples shall be packed in the box by the method known to the trade as the "diagonal pack". When the box has been filled, the lining papers shall be folded over the top of the apples and a sheet of corrugated cardboard 17½ inches by 11 inches placed over the lining papers with the smooth side next the fruit. The lid should then be affixed by means of nails driven through the cleat at each end.

4. *Box "Z"*

- (a) A sheet of corrugated cardboard, of a quality not less than 30 lb. to the roll, shall be placed smooth side next the fruit below the bottom layer and at each end of the box and another sheet above the top layer of apples, and no substitute for corrugated cardboard shall be used.
- (b) A wood wool or excelsior pad not exceeding one inch in thickness may be placed under the apples in addition to the sheet of corrugated cardboard. Where a cardboard lid is used the sheet of corrugated cardboard above the top layer of apples may be dispensed with. The sides of the box may be lined with plain paper, if so desired.
- (c) The apples shall be firmly packed in the box and there shall be sufficient bulge on the top of the box to ensure that when the wooden lid is nailed down the apples are held firmly in position. This lid must be nailed through the cleat at each end of the box and be further secured by wire round the box at each end. Where a cardboard lid is used, it must be secured by means of at least two staples at each end and at each side of the box.

5. *Carton (two types)*

- (a) Only apples of Fancy ("F") or Domestic ("Dom") standards may be packed in these containers.
- (b) No additional packing material is permitted.
- (c) The apples shall be firmly packed in the two compartments so that when the two flaps constituting the lid are secured the fruit is held firmly in position.
- (d) The outside top flaps must be folded over, not sealed, and be secured by means of two wires or two bands, one at each end of the carton. Each wire or band shall be not less than 2 inches or more than 4 inches from the end of the carton.

6. *Half-barrel (Keg)*

The apples shall be packed firmly in the barrel. No other packing save a single disc of corrugated cardboard, smooth side to the fruit, or a sheet of paper shall be placed below the bottom layer. When the barrel has been filled up to at least six inches of the top the inside shall be lined with paper which shall be folded over the rim of the barrel. When the barrel has been filled the overlapping paper shall be used to cover the top of the apples. A layer of wood-wool of sufficient thickness shall be placed on top of this paper to ensure that the cover with which the apples in the barrel shall be secured shall not damage the apples. Alternatively, clean, dry hay or straw or other material that will not taint the fruit may be used.

## PART III
