

SCHEDULE 3

Nutrient standards for school meals

2. The average school meal for a school must be calculated in accordance with the following formula:—

$$\frac{A}{B} \div C$$

Where—

“A” is the total amount of energy and nutrient content provided in all school meals served in the course of a school week;

“B” is the estimated number of school meals served to pupils during that school week; and

“C” is the number of days in the school week.
