21(2)Requirements for spring water and drinking water
including prescribed concentrations or values of parameters

PART 1

Requirements for spring water and drinking water

1. Water satisfies the requirements of this Schedule if —
 - (a) the water does not contain —
 - (i) any micro-organism (other than a parameter) or parasite, or
 - (ii) any property, element or substance (other than a parameter),
 at a concentration or value which would constitute a potential danger to human health;
 - (b) the water does not contain any substance (whether or not a parameter) at a concentration or value which, in conjunction with any other property, element, substance or organism it contains (whether or not a parameter), would constitute a potential danger to human health;
 - (c) the water does not contain concentrations or values of any of the parameters listed in Tables A to D in Part 2 of this Schedule in excess of the prescribed concentrations or values; and
 - (d) in the case of water prepared from water which has been softened or desalinated, its hardness is not below a minimum concentration of 60 mg Ca/l.
2. The concentrations or values of the parameters listed in Tables A to D in Part 2 of this Schedule shall be read in conjunction with the notes thereto.
