The Space Industry Regulations 2021

PART 6

Range Control Services

CHAPTER 6

Safety

Safety and quality management systems requirement

52.—(1) Without prejudice to any conditions attached to a licence, a licensee must establish and implement management systems, including a safety management system, that give due priority to safety in relation to the provision of the licensee's range control services.

(2) The licensee must, within its management systems, make, implement and maintain adequate quality management arrangements in respect of all matters relating to the provision of the licensee's range control services which may affect the safety of the operator's spaceflight activities.

(3) Prior to the commencement of the licensee's range control services, the licensee must submit to the regulator a written record of the systems and arrangements referred to in paragraphs (1) and (2).

(4) The licensee must provide prior notice to the regulator of any material alteration or amendment to the management systems or quality management arrangements referred to in paragraph (3).

(5) The licensee must provide to the regulator copies of records or documents referred to in, or relating to, such management systems or quality management arrangements as the regulator may require.
